

MyFile for College - Making Positive Connections – for Life

Starting college and a new chapter in one's life can seem a little daunting at first. MyFile for college is designed to make this transition much easier by helping students feel more connected with their new surroundings – making the transition into college life a happier, healthier and more rewarding experience.

College Learning Communities – for a Healthy Student Body

The purpose of Learning Communities is to help students make and maintain a positive connection to their college campus from the outset of their college career. Learning Communities enhance student retention, student involvement, and student achievement, but in the past, there have been challenges associated with implementing Learning Communities. MyFile for College was developed to address these challenges.

Helping Students Connect – Integrated Interaction

By their very nature, Learning Communities are “Hybrids” that augment the traditional teaching environment, enhancing the overall college experience by highlighting activities found outside the classroom. By engaging the student body through activities such as social and academic events – faculty advisors can better assist students and help them integrate into college life much more easily. MyFile for College programs can be easily customized to focus on each individual – highlighting appropriate activities based upon educational curriculum, sports participation, club memberships and any other appropriate criteria.

Highly Customizable – for Every Student, and College

Just as every student and college is different, so too is the way that MyFile for College may be configured. MyFile is highly configurable, supports virtually any learning discipline, and works with multi-media teaching tools. In terms of results-oriented metrics, MyFile provides assessment planning, and data capture and tracking for both students and instructors, providing ongoing assessment of the health and welfare of both individual students in particular, and the student body in general.

Additionally MyFile promotes health and wellness of community users by establishing a baseline of health, tracking personal health information and delivers action plans as needed for health improvement programs. This Web-based environment promotes better health by:

- Delivering Learning Community programs via MyFile Action Plans (MAPs)
- Enabling instructors to create customized learning programs using multi-media content
- Providing the metrics to track and evaluate students' progress and measure results
- Capturing, maintaining and tracking each member's personal health information
- Gaining an understanding of each members' personal health risks
- Creating a personal success map for social, educational, health, wellness, and fitness goals

Promoting Mental & Physical Health & Wellness – for Life

Mental and physical health and wellness are important components of both academic and career success. Using MyFile for College with Learning Communities, colleges and universities are able to provide the resources, information and action plans that students need to be successful in their college careers. MyFile eliminates the need to build expensive Web sites in support of Learning Communities, and faculty and staff can update the content of the environment quickly and easily online. Efficient, easy to use, and cost-effective, make MyFile for College the results-oriented choice to engage your student body into a healthy and happy Learning Community.
